

## Domus of the Republican Sanctuary - Brescia

In the domus LAMBDA spa is providing a detection system of environmental parameters and microclimatic monitoring.

Since 2009, are kept under observation, with a centralized WireClimart, temperature, humidity, light and air flow. With an interval of 30 minutes is sampled data, once downloaded, they are processed and analyzed according to the protocols. The objective is the study of internal environmental condition in view of a draft musealization that will make the domus accessible to the public.
