

Museum of Masaccio House - San Giovanni Valdarno

Museum of Masaccio House, in Corso San Giovanni Valdarno, is currently used for exhibitions and conferences. In the sixth centenary of the birth of the great Tuscan artist, the council has developed a project to upgrade the museum.

The air conditioning system designed by LAMBDA is composed of seven air conditioning units, each of which simultaneously adjusts the heating, cooling, humidification and dehumidification of ambient air, with thermo hygrometric levels determined and deemed suitable for museum environments. The adjustment of the thermo hygrometric parameters is via software, remotely managed.
