

Villa Saraceno – Agugliaro, VI

LAMBDA's work at Villa Saraceno, palladian villa built in 1545, is mainly aimed at the knowledge of the state of art of the building.

The property, The Landmark Trust, follows the principles of fidelity to the original so any restoration work is carried out with the materials and methods of the tradition.

LAMBDA worked here keeping well in mind the ethics of the Foundation, and in November 2012 LAMBDA installed a control system with wireless

connectivity for a minimum aesthetic impact. The control unit, communicating with peripheral sensors via radio, can be interrogated remotely for the periodic downloading of data.
